

Aviva[®] for Desktops™

Secure multi-host access for Windows[®] platforms

Secure multi-host connectivity

Today's enterprises need secure access to their host information.

Aviva Solutions' Aviva for Desktops is positioned to solve these business imperatives, and more. The most comprehensive software solution upon which enterprises can standardize their multi-host access requirements, Aviva for Desktops TLS/SSL and SSH encryption provides corporations with the secure connections they require for accessing their corporate information.

What's more, Aviva for Desktops includes a rich set of connectivity, user productivity and automation features to reduce learning curves and increase the comfort and ease of obtaining data, thus improving productivity and user satisfaction levels.

Aviva for Desktops' common user and programming interfaces, effective and effortless deployment make accessing IBM mainframe, midrange, DEC, Linux and UNIX hosts as simple as possible.

Provide your enterprise-wide users with a proven secure, full-function, multi-language, multi-host connectivity solution for accessing critical host-based information.

Aviva for Desktops - secure multi-host access for Windows platforms.

Advantages

Multi-host Connectivity – Supports IP-based, as well as gateway-based connectivity to IBM hosts and standard Telnet and SSH connectivity to DEC and Unix hosts.

TLS/SSL Encryption – Supports standard client and server certificates as well as standard cryptography algorithms to secure host connections.

SSH Encryption – Supports SSH connectivity to DEC, Linux and Unix hosts, as well as transparent SSH Tunneling for access to IBM mainframe and midrange hosts.

Extensive Desktop Tools for Enhanced Productivity and Ease-of-Use – Choose between the Ribbon and the classic menu session user interface. Includes host color remapping; keyboard remapping; screen hotspots configuration, eliminating the need to use keyboard function keys; full screen mode; session history allowing review, save, print, copy, search of past user interactions.

Tablet and touch-screen – Supports intuitive gestures, screen rotation and soft-keyboard operation on today's portable, Intel powered Windows devices.

ActiveX™ Automation – Aviva for Desktops functions as both an ActiveX Controller and Server, which means it can control or be controlled by other ActiveX-compliant applications, enabling users to easily integrate host information with popular desktop applications. Interoperability with Microsoft .NET framework, 32 and 64 bit Office VBA.

Aviva for Desktops – Additional Benefits

Rich Automation and Programmatic Access Capabilities include WinHLLAPI / HLLAPI 32 and 64 bit, VBA-compatible AvivaBasic and ActiveX automation, Microsoft Office 32 and 64 bit VBA applications, and.NET.

Integrated Macro Recorder and Editor let users automate online tasks such as logging on to the host and copying information between sessions.

Intuitive Wizards provide step-by-step instructions to create new sessions and destinations.

Exceptional Diagnostics, Error Reporting and Comprehensive Trace and Logging Utilities are available locally or remotely, to give the in-depth analysis needed to streamline and accelerate problem solving.

Extensive International Keyboard and Font Support for 48 languages and layouts allow multi-national corporations to standardize on one emulator product for worldwide host connectivity.

Supports

- Microsoft Windows 10, Windows 8, Windows 7
- English, French, German, Italian and Spanish user interface
- Enhanced IND\$FILE file transfer
- Enhanced FTP file transfer
- Unattended installations

Host Connection Types

- TN3270, TN3270E, TN5250E, VT420 over Telnet and SSH
- SNA LAN Gateways: Microsoft Host Integration Server, IBM Communications Server

Security

- TLS/SSL and SSH Encryption
- Server and client certificates
- Windows integrated authentication
- SOCKS Version 4 proxy server support
